## Cartoon Analysis Worksheet

### Level 1

<table>
<thead>
<tr>
<th>Visuals</th>
<th>Words (not all cartoons include words)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. List the objects or people you see in the cartoon.</td>
<td>1. Identify the cartoon caption and/or title.</td>
</tr>
<tr>
<td></td>
<td>2. Locate three words or phrases used by the cartoonist to identify objects or people within the cartoon.</td>
</tr>
<tr>
<td></td>
<td>3. Record any important dates or numbers that appear in the cartoon.</td>
</tr>
</tbody>
</table>

### Level 2

<table>
<thead>
<tr>
<th>Visuals</th>
<th>Words</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Which of the objects on your list are symbols?</td>
<td>4. Which words or phrases in the cartoon appear to be the most significant? Why do you think so?</td>
</tr>
<tr>
<td>3. What do you think each symbol means?</td>
<td>5. List adjectives that describe the emotions portrayed in the cartoon.</td>
</tr>
</tbody>
</table>

### Level 3

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Describe the action taking place in the cartoon.</td>
<td></td>
</tr>
<tr>
<td>B. Explain how the words in the cartoon clarify the symbols.</td>
<td></td>
</tr>
<tr>
<td>C. Explain the message of the cartoon.</td>
<td></td>
</tr>
<tr>
<td>D. What special interest groups would agree/disagree with the cartoon’s message? Why?</td>
<td></td>
</tr>

SHOOTINGS

CHRISTMAS

MERRY

US GUN CULTURE
$150 REWARD

RANAWAY from the subscriber, on the night of the 2d instant, a negro man who calls himself Henry May, about 22 years old, 5 feet 6 or 8 inches high, ordinary color, rather chunky built, bushy head, and has it divided mostly on one side, and keeps it very nicely combed; has been raised in the house, and is a first rate dining-room servant, and was in a tavern in Louisville for 18 months. I expect he is now in Louisville trying to make his escape to a free state, (in all probability to Cincinnati, Ohio.) Perhaps he may try to get employment on a steamboat. He is a good cook, and is handy in any capacity as a house servant. Had on when he left, a dark cassineet coat, and dark striped cassinett pantaloons, new—he had other clothing. I will give $50 reward if taken in Louisville; 100 dollars if taken one hundred miles from Louisville in this State, and 150 dollars if taken out of this State, and delivered to me, or secured in any jail so that I can get him again.

Bardstown, Ky., September 3d, 1838.

WILLIAM BURKE.
Document Questions

1. Who was Henry May, and what is his relationship to William Burke?
   A. Henry May is a slave owner; William Burke is his slave
   B. Henry May is a worker; William Burke is a tavern owner and Henry’s boss
   C. Henry May is a young man; William Burke is a tavern owner and Henry’s father
   D. Henry May is a slave; William Burke is a tavern owner and Henry’s owner

2. This posting would serve as a good example if you were writing a book on:
   A. The French and Indian War
   B. The Fugitive Slave Act
   C. Modern Advertising
   D. Hiking around Louisville

3. What is the best explanation for why there are three different rewards?
   A. The farther a slave can get from their owner the more likely they are to gain their freedom
   B. The owner has to spend more money on gas if they have to go outside Louisville
   C. If the slave is returned alive you get more money
   D. You get more money if you are a bounty hunter or bailer

4. Why might this slave have been especially valuable to his owner?
   A. He didn’t eat much
   B. He was versatile and a good cook
   C. He had been loyal and trustworthy for a long time
   D. He was good at record keeping and writing letters for his owner
Scientific Method Lesson:

Observation/Problem/Question:

Someone observes something interesting, they have a problem they want to solve, or a question they want to answer or test

Hypothesis:

Idea or theory of what you think will happen, or what you think is causing something to happen

Experiment:

Procedure you design to test if the hypothesis is true or not

Control Group:

Group that is not being changed, not receiving treatment, or action to test the hypothesis

Experimental Group:

Group that is being changed, or receiving treatment or action to test the hypothesis

Independent Variable:

The thing being changed or added to the experimental group

Dependent Variable:

The thing being measured, the result that you are testing from the hypothesis

Conclusion/Analysis:

Did the results (the measurements of the dependent variable) demonstrate that they hypothesis was true or not?
Keisha makes a cup of tea every morning. One morning right as she pours the hot water in the cup the doorbell rings and she goes to answer the door before she puts the sugar in the cup. Her friend is at the door and they end up talking a while and when Keisha returns to the kitchen her cup of tea has cooled off a little. When she puts the sugar in the cup and stirs, she notices that not all the sugar dissolves in the water like usual. She thinks a while and decides maybe the temperature of the water affects how much sugar can dissolve in the water. So she designs an experiment. She has two cups and she has 1 tablespoon of sugar next to each cup. She pours boiling hot water in one cup and cool water in the 2nd cup. She makes sure that she pours exactly 1 cup of water in each cup. Then she puts 1 tablespoon of sugar in each cup and she stirs each cup exactly 10 times. She then looks in the bottom of each cup and notes how much sugar is in the bottom of each cup. The cup with the hot water has no sugar and the cup with the cool water has some sugar in the bottom. Keisha concludes that the higher the water temperature is, the faster the sugar will dissolve.

Keisha makes a cup of tea every morning. One morning right as she pours the hot water in the cup the doorbell rings and she goes to answer the door before she puts the sugar in the cup. Her friend is at the door and they end up talking a while and when Keisha returns to the kitchen her cup of tea has cooled off a little. When she puts the sugar in the cup and stirs, she notices that not all the sugar dissolves in the water like usual. She thinks a while and decides maybe the temperature of the water affects how much sugar can dissolve in the water. So she designs an experiment. She has two cups and she has 1 tablespoon of sugar next to each cup. She pours boiling hot water in one cup and cool water in the 2nd cup. She makes sure that she pours exactly 1 cup of water in each cup. Then she puts 1 tablespoon of sugar in each cup and she stirs each cup exactly 10 times. She then looks in the bottom of each cup and notes how much sugar is in the bottom of each cup. The cup with the hot water has no sugar and the cup with the cool water has some sugar in the bottom. Keisha concludes that the higher the water temperature is, the faster the sugar will dissolve.

**Observation:** She notices all the sugar in the cool tea has not dissolved.

**Hypothesis:** She thinks maybe the temperature affects how much sugar dissolves in the water.

**Experiment:**
- 2 cups
  - hot water in 1 cup
  - cool water in 1 cup
  - 1 cup of water + 1 tablespoon of sugar in each cup
  - Stirs 10 times

**Control Group:** Cup with hot water

**Experimental Group:** Cup with cool water

**Independent Variable:** Temp of water

**Dependent Variable:** Sugar doesn't completely dissolve in cool water

**Conclusion:** Temperature does affect how much sugar dissolve.
Scientific Method Questions:

Gabriel has a garden and a chicken coop in his backyard. He noticed last summer that the green beans that he planted close to the fenced-in chicken area, grew taller than the green beans that he planted farther away from the chicken area. He thought about it for a while and decided that maybe the chicken manure was causing the green beans to grow taller. So he decided to test out his idea. The next year he took two boxes and placed soil in each box. Then he planted 12 bean seeds in each box. He placed some chicken manure on the soil in one of the boxes. He measured the height of the green bean plants after six weeks and he found that 10 of the 12 plants in the box with the chicken manure were taller than all the 12 plants in the other box with no chicken manure. So now Gabriel believes that chicken manure helps green beans to grow taller.

Describe the following items from this example.

Observation: ____________________________________________

________________________________________________________________

Hypothesis: ____________________________________________

________________________________________________________________

Experiment: ____________________________________________

________________________________________________________________

Control Group: __________________________________________

________________________________________________________________

Experimental Group: ________________________________________
1. For Gabriel to believe that the conclusions of this experiment are accurate which of the following assumptions did he make?
   a) The plants would grow to the same height
   b) The plants would receive the same amount of water
   c) The plants with the chicken manure would need more sunlight
   d) The chicken manure would be proven to cause the plants to grow taller

2. If the results of the experiment were different and five of the plants with chicken manure grew taller, five plants with the chicken manure grew shorter, and two plants with the chicken manure grew the same height as those without chicken manure, what would the results show about the hypothesis?
   a) They disprove it
   b) They cast doubt on it, but do not disprove it
   c) They prove it to be true
   d) They support it, but don’t prove it
Questions #3 and #4 refer to the following paragraph:

On a winter day Melissa started to put salt on her icy sidewalk but she ran out of salt when she had only covered half the sidewalk. The part she put the salt on was also the part that received sun. The other section of the sidewalk was in the shade. Later in the day, Melissa noticed that the ice had melted on the part of the sidewalk where she had put the salt, but the ice hadn’t melted on the other part of the sidewalk. Melissa concluded that the salt must make the ice melt faster.

3. Why is Melissa’s conclusion faulty?

a) She didn’t put the salt on both parts of the sidewalk.
b) It was too warm to conduct the experiment.
c) The ice didn’t melt on the second part of the sidewalk.
d) She didn’t ensure that all the other variables were controlled (the same).

4. Melissa’s friend, Tony, tells Melissa, she can design an experiment to test her hypothesis. (to see if her conclusion is true) The next time her sidewalk is icy, she decided to conduct an experiment to see if the salt really does make the ice melt faster. Melissa decides to create a control section of the sidewalk (no salt applied) and an experimental section of the sidewalk (salt applied). To ensure that her experiment results are accurate, Melissa should make sure that all of the following are true EXCEPT which one?

a) Both the control section and the experimental section should receive the same amount of sunshine.
b) Both the control section and the experimental section should receive the same amount of salt.
c) Both the control section and the experimental section should start with the same amount of ice.
d) Melissa should compare the amount of ice melt several times before the ice has melted in both the control and experimental sections.
